Healthy child is a
happy child let us help
to treat.

Pediatric Dosing Is Weight Base
(Dont Guess The Dosage)

Drug Dose will often require
change as the child grows.

Allergic Free Safe & Effective
Formulations

Flavored Medication That Are
Tastier To Ingest

Calculations

Dosage Estimations Based On Weight:

Augsberger's rule:

$$\frac{(1.5 \times \text{wt. in kg} + 10)}{\% \text{ of adult dose}} = \text{Child's approx.dose}$$

$$\frac{\text{Wt (in lb)} \times \text{adult dose}}{150} = \text{Child's approx.dose}$$

Dosage Estimations Based On Age:

Augsberger's rule:

$$\frac{(4 \times \text{age in years} + 20)}{\% \text{ of adult dose}} = \text{Child's approx.dose}$$

Bastedo's rule:

$$\frac{\text{Age in years} + 3 \times \text{adult dose}}{30} = \text{Child's approx.dose}$$

Cowling's rule:

$$\frac{\text{Age at next birthday(in year)} \times \text{adult dose}}{24} = \text{Child's approx.dose}$$

Dilling rule:

$$\frac{\text{Age (in year)} \times \text{adult dose}}{20} = \text{Child's approx.dose}$$

Fried's rules for infants (younger than 1 year):

$$\frac{\text{Age (in months)} \times \text{adult dose}}{150} = \text{Child's approx.dose}$$

Young's rule:

$$\frac{\text{Age (in year)} \times \text{adult dose}}{\text{Age} + 12} = \text{Child's approx.dose}$$

References : Lam TK & Leung DT, "More on simplified calculation of body surface area." *N Engl J Med*, 1988,318(17): 1130 (Letter).
Mosteller RD, "simplified calculation of body surface area" *N Engl J Med*, 1987,317(17): 1098 (Letter).

Children (IBW is in kg; height is in cm)

a. 1-18 years IBW = (height x 1.65) / 1000

b. 5 feet & taller :

IBW (male) = 39 + (2.27 x height in inches over 5 feet)

IBW (female) = 42.2 + (2.27 x height in inches over 5 feet)

Body Mass Index (BMI)

$$\text{BMI} = \text{weight (kg)} / [\text{Height(m)}]^2$$

Body Surface Area Formula (Adult & Pediatric)

$$\text{BSA(m}^2\text{)} = \sqrt{\frac{\text{Ht(in)} \times \text{Wt (lb)}}{3131}} \quad \text{OR} \quad \text{BSA(m}^2\text{)} = \sqrt{\frac{\text{Ht(cm)} \times \text{Wt (kg)}}{3600}}$$

metric

Milliequivalent Conversion

To convert mg/100ml to mEq/L
the following formula may be used:
$$\frac{(\text{mg}/100\text{ml}) \times 10 \times \text{valence}}{\text{Atomic weight}} = \text{mEq/L}$$

To convert mEq/L to mg/100 the
following formula may be used:
$$\frac{(\text{mEq/L}) \times \text{atomic weight}}{10 \times \text{valence}} = \text{mg}/100 \text{ ml}$$

To convert mEq/L to volume of
percent of a gas the following
formula may be used:
$$\frac{(\text{mEq/L}) \times 22.4}{10} = \text{volume percent}$$

Approximate Liquid Measures

Basic equivalent: 1 fluid ounce = 30ml

Example:

8 fluid oz	240 ml	15 minims	1 ml
4 fluid oz	120 ml	10 minims	0.6 ml
1 tea spoon ful	5 ml	1 table spoon ful	15 ml

Basic equivalent: 1 gm1000 mg 1 mg1000 meg

Example:

5 gm.....5000 mg	5 mg5000 meg
0.5 gm.....500 mg	0.5 mg500 meg
0.05 gm.....50 mg	0.05 mg50 meg

“A Healthy Start” Begins With On Time Medication

Nigehban provide top-notch and exceptional care with compassion for your child

Finding the Right medicine,
for right disease,
at the right time
with right dosage
for Your Child.

Nigehban®
